Exercise 9 Date:

Design input forms that validate data (e.g., email, phone number) and display error messages using HTML/CSS, JavaScript (with Validator.js)

AIM:

The aim is to design input forms that validate data, such as email and phone number, and display error messages using HTML/CSS and JavaScript with Validator.js.

PROCEDURE:

Step 1: Setting Up the HTML Form

Start by creating an HTML form with input fields for the email and phone number.

html

Step 2: Styling the Form with CSS

Next, add some basic styling to make the form look nice.

css

```
/* style.css */
body {
   font-family: Arial, sans-serif;
   background-color: #f4f4f4;
   display: flex;
   justify-content: center;
   align-items: center;
```

```
height: 100vh;
  margin: 0;
}
.container {
  background-color: white;
  padding: 20px;
  border-radius: 5px;
  box-shadow: 0 0 10px rgba(0, 0, 0, 0.1);
}
form {
  display: flex;
  flex-direction: column;
}
label {
  margin-bottom: 5px;
}
input {
  margin-bottom: 10px;
  padding: 10px;
  border: 1px solid #ccc;
  border-radius: 3px;
button {
```

```
padding: 10px;
background-color: #28a745;
color: white;

border: none;
border-radius: 3px;
cursor: pointer;
}

button:hover {
  background-color: #218838;
}

.error {
  color: red;
  font-size: 0.875em;
}
```

Step 3: Adding JavaScript for Validation

Finally, add JavaScript to validate the input fields using Validator.js and display error messages.

javascript

```
/* script.js */
document.getElementById('myForm').addEventListener('submit', function (e) {
    e.preventDefault();
```

```
let email = document.getElementById('email').value;
  let phone = document.getElementById('phone').value;
  let emailError = document.getElementById('emailError');
  let phoneError = document.getElementById('phoneError');
  // Clear previous error messages
  emailError.textContent = ";
  phoneError.textContent = ";
  // Validate email
  if (!validator.isEmail(email)) {
     emailError.textContent = 'Please enter a valid email address.';
  }
  // Validate phone number
  if (!validator.isMobilePhone(phone, 'any')) {
    phoneError.textContent = 'Please enter a valid phone number.';
  }
  // If no errors, submit the form (for demonstration purposes, we'll just log the values)
  if (validator.isEmail(email) && validator.isMobilePhone(phone, 'any')) {
     console.log('Email:', email);
     console.log('Phone:',
    phone);
});
```

OUTPUT:

Contact Form

Email 230701358@rajalakshmi.edu.in
Phone Number 230701358
Submit

RESULT:

Hence the input forms to validate data are implemented and executed using html,css and js.
